Amazon RDS for Aurora

Amazon Aurora is a MySQL-compatible, enterprise-class database at 1/10th the cost of commercial databases. Aurora supports up to 15 low-latency read replicas, 64TB of auto-scaling storage capacity, and 6-way replication across three availability zones. [Learn more.](#)

Aurora is available in US East (N. Virginia), US West (Oregon), EU (Ireland), Asia Pacific (Tokyo), Asia Pacific (Sydney), Asia Pacific (Seoul) and Asia Pacific (Mumbai).

SQL Server

MySQL

MySQL Community Edition

MySQL is the most popular open source database in the world. MySQL on RDS offers the rich features of the MySQL community edition with the flexibility to easily scale compute resources or storage capacity for your database.

- Supports database size up to 6 TB.
- Instances offer up to 32 vCPUs and 244 GiB Memory.
- Supports automated backup and point-in-time recovery.
- Supports cross-region read replicas.
